### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of Figures 1-4, claims 1-3 and 7 in the reply filed on 10/26/2004 is acknowledged.
2. Claims 4-6, 8-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/26/2004.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 3749

5. Claims 1-3 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chipley (U. S. Pat. 2,329,102) in view of Saiki et al. (U. S. Pat. 4,693,173).

Chipley shows a ceiling air blowing device for a vehicle air conditioner comprising a duct 3 and a ceiling wall 8 with a plurality of holes same as claimed. However, Chipley does not disclose the holes are disposed such that a total area of the openings of the holes per unit area at a first position that is proximate to the end of the duct is smaller than that at a second position that is farther from the end of the duct than the first position. Saiki et al. teach an air blowing device with the holes (not numbered, See Fig. 4, located at 106) are disposed such that a total area of the openings of the holes per unit area at a first position that is proximate to the end of the duct 108 is smaller than that at a second position that is farther from the end of the duct 108 than the first position for improving the air flow (Col. 4, lines 16-25) same as claimed. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the ceiling air blowing device of Chipley to dispose the holes such that a total area of the openings of the holes per unit area at a first position that is proximate to the end of the duct is smaller than that at a second position that is farther from the end of the duct than the first position as taught by Saiki et al. in order to improve the air flow.
